ABSTRACTED-PUB-NO: DE 29807448U

BASIC-ABSTRACT:

The shower hose has a moulded plastic connector part with a coaxial radial flange. The flange (3) is connected to a fitting via a union nut. It is mainly integrally welded to the end face (10) of the hose (1).

If the hose has a reinforcing webbing insert, the flange is additionally held resp. toothed by plastic, which penetrated into the insert during moulding of the flange. The flange also has a thin-walled integral overlap (4) engaging on inside and/or outside of the hose.

ADVANTAGE - Cheap mass manufacture, reliable sealing and pull-off resistance.
